## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Election/Restriction*

1. Claims 14, 25, and 26 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species and group, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 4.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-13 and 15-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Barnes et al(6,132,480) in view of Johnson et al(6,136,114).

Barnes et al discloses an igniter composition used in inflatable devices such as vehicle occupant restraint devices which are in a housing and act to ignite a gas generant composition which inflates the air bag(see col. 1). The igniter composition comprises 10-25 % boron, 55-80 % of an oxidizer such as  $\text{KNO}_3$ , and 10-25 % of an organic gas-producing fuel such as guanidine nitrate. Barnes et al does not specifically suggest the use of the igniter in a micro-gas generator.

Johnson et al teaches a micro gas generator that contains an igniter composition.

Art Unit: 3641

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the igniter composition of Barnes in a micro-gas generator because Barnes suggests that it can be used to ignite a gas generant and also because Johnson et al teaches the use of igniter compositions with a micro gas generator.

***Conclusion***
